

## Abstract

The proposed Mini project titled "Straight to Your Dream Home Platform" is a user-friendly web application designed to simplify the process of renting houses and flats. The website features three main modules: Admin Module, Tenant Module, and Lessee Module, each tailored to specific roles and functionalities. The Admin Module oversees the entire platform, managing property listings, monitoring user activity, and resolving disputes to ensure smooth operations. The Tenant Module allows users to explore a diverse range of properties, filter options by location, room type, and price range, and save their preferred choices to a personalized favourites list. The Tenants can also provide feedback in the form of suggestions and ratings to enhance the platform's services. The Lessee Module enables users to enter property details, listing their properties for rent with complete detailed descriptions and images. Additional features include a Notification System that keeps users informed about new property suggestions based on their preferences and a Feedback System that collects user opinions for continuous improvement. By integrating robust search filters, personalized recommendations, and streamlined property management, the platform aims to provide a seamless experience for all users, making it an efficient solution for housing needs in the digital age.
